New Zealand Health Care Home Collaborative Participating Organisations \_25

#### **Health Care Home Collaborative** (the Collaborative)

The Collaborative was formed in 2016 with the principle objective to support the establishment and ongoing development of the Health Care Home across New Zealand and to ensure HCH practices are of a high quality and provide a consistent standard of care.

To achieve its principle objective, the Collaborative will support. promote, maintain and oversee the HCH Model of Care with a view to improving patient health care, health outcomes and the management of related services. Members of the Collaborative include various PHOs and DHBs in New Zealand.

#### NZ Health Care Home (HCH) **Model of Care Requirements**

The HCH Model of Care is a patient-centric approach which enables primary care to deliver a better patient and staff experience, improved quality of care, and greater efficiency. The Collaborative established the HCH Model of Care Requirements, first published in July 2017 to demystify the HCH Model of Care, and to provide clear guidance for those who want to implement it. Consistent implementation of the HCH model in general practices nationally is important so that all patients enrolled in HCH practices can expect the same standard of service.

The HCH Model of Care requirements document sets out the health care home service elements and characteristics of a health care home practice. These are grouped into four core domains:

- 1. Ready access to urgent and unplanned care.
- 2. Proactive care for those with more complex need.
- 3. Better routine and preventative care.
- 4. Improved business efficiency & sustainability.

Within each domain a maturity matrix is provided with:

- · Service elements that describe important HCH Model of Care requirements;
- Characteristics that allow a practice to map their current model of care systems and processes on a development scale.

The HCH maturity matrix for each domain provides a continuum of model of care descriptors, using scoring of 1 (low maturity) to 4 (high maturity) for each indicator, with 4 being the target on the continuum, i.e. what best looks like for a HCH Practice.

A maturity matrix approach has been used to recognise that HCH practices are on a continuous improvement journey, hence a developmental approach is being taken, rather than a quality assurance approach. Further clarification and descriptions of several terms and processes mentioned in this document are provided in a supplementary online guide and is available on the HCH Collaborative website: healthcarehome.org.nz

#### What's changed in this version?

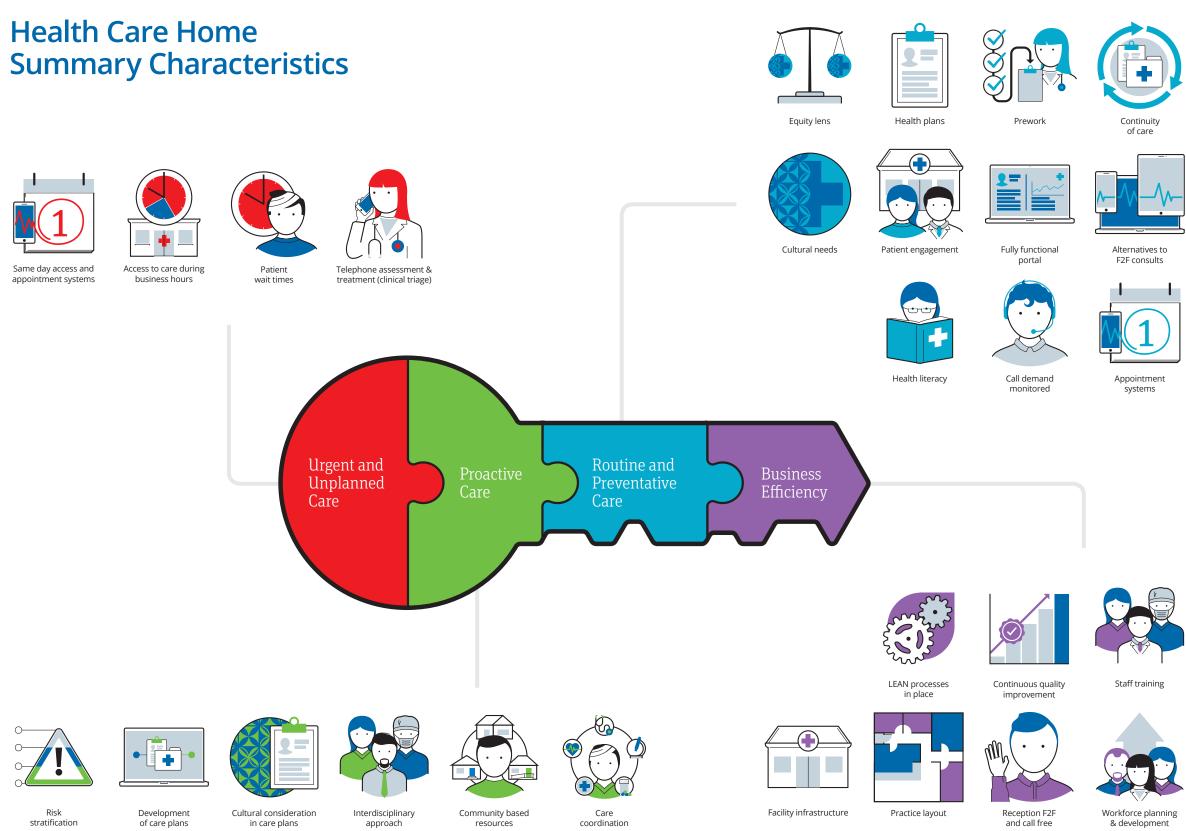

This is the second iteration of the national HCH Model of Care requirements. We aim to review the requirements annually to ensure they remain relevant and to ensure that patient and whanau needs are reflected in the model. The changes in this version include a number of minor alterations to more accurately reflect the model as it is being implemented, and to clarify the expectations and definitions as set out by the National Collaborative. This second version also incorporates a stronger, more explicit equity lens. The addition of a new equity-focused service element requires HCH practices to demonstrate an understanding of inequities within their enrolled population. HCH Certification will require evidence of the Practice's ability to monitor processes and outcomes by ethnicity and to develop a practice-based approach to achieving equitable health outcomes where possible (especially for Māori, Pacific and patients living in high deprivation). In addition, the national benchmarking measures (currently in development) will include reporting by ethnicity, to support continuous improvement for all enrollees.

The Collaborative is currently undertaking work to strengthen consumer co-design, and partnership, participation and protection of Maori within the HCH Model of Care. This work will be reflected in the next iteration of the requirements.

More information about the Collaborative and a digital copy of this document can be found at: healthcarehome.org.nz

The Collaborative is currently undertaking work to strengthen consumer co-design, and partnership, participation and protection of Māori within the HCH Model of Care. This work will be reflected in the next iteration of the requirements.

# Domain: Urgent and Unplanned Care

What's most important to our patients is that when they are ill or concerned about a health issue they receive clinical advice and treatment when needed.

Workforce development and extended team enable general practices to do more for patients.

#### Health Care Home Maturity Matrix

| Service elements  | Characteristic                     | 1   | 2   | 3   | 4  |
|---|------------------------------------|---|---|---|--|
| 19.<br>Clinicians and other staff<br>have access to separate<br>private spaces to take<br>phone calls, work on their<br>computers, process<br>paperwork and consult with<br>each other and other staff<br>in the practice — helping<br>make the Health Care Home<br>a team effort | 19.1<br>The practice<br>layout     | requires staff to work<br>in isolation                          | provides limited capacity<br>for staff to interact  | allows some staff to<br>interact and consult with<br>each other most of the<br>time   | enhances t<br>phone calls, v<br>paperwork ar<br>other staff in     |
| 20.<br>The practice develops<br>broader team roles to<br>enable GPs, Nurses   | 20.1<br>The practice               | does not have an<br>organised approach to<br>workforce planning | routinely assesses staff roles and responsibilities   | routinely assesses staff<br>roles and responsibilities,<br>and supports staff working<br>at the top of their scope  | supports al<br>top of their so<br>wider roles th<br>patient well-b |
| and other clinicians to<br>consistently work at<br>the top of their scopes<br>throughout the day, and<br>expand their services to   | 20.2<br>Practice workforce<br>plan | is not in place   | is ad-hoc   | is undertaken through<br>limited analysis of<br>population and workforce<br>skill mix   | is carried o<br>development<br>and welfare o                       |
| patients  | 20.3<br>Clinical leadership        | is not actively<br>encouraged                                   | is encouraged and not supported with training   | is undertaken with<br>limited training to support<br>clinical staff to lead change,<br>deliver new models of care,<br>and to continuously<br>improve services | is undertak<br>administrativ<br>and deliver n<br>improve serv      |
|   | 20.4<br>The practice               | does not consider<br>having an extended<br>team                 | investigates the value of<br>additional roles (e.g. PCPAs,<br>clinical pharmacists, health<br>coaches, etc) but does not<br>include these roles in the<br>practice team | actively investigates the<br>value of additional roles<br>but the extended practice<br>team is limited, and not yet<br>fully integrated                       | has an exte<br>fully integrate                                     |

s teamwork by allowing all staff to take s, work on their computers, process and easily consult with each other and in the practice easily

all staff having the capacity to work at the scope, assesses training needs to take on that would add to the team's efficiency and l-being

l out through a regularly reviewed practice ent and workforce plan that meets the needs e of the practice team and population

aken with regular training and support for tive and clinical staff to lead change, support new models of care, and to continuously rvices

ktended team with various additional roles, ated and co-located where possible

#### Principles of the Health Care Home National Dataset

Some of these measures continue to be developmental and will require further work to define numerators and denominators. Not all Health Care Home practices will wish to benchmark on all the indicators – practices and PHOs will choose those most relevant to their context locally.

All measures will be reported through an appropriate equity lens The purpose of collecting the national data set measures is to demonstrate system impact of the Health Care Home model of care and for individual practice and programme improvement.

The custodian of the national data set will be the New Zealand Health Care Home National Governance Group. The national collection is solely for benchmarking within the Collaborative community, and will not be used for judgement, or distributed externally without explicit permission of the members.

#### The principles relevant to the measures include:

- 1. All measures will be reported through an appropriate equity lens
- 2. The measures will be meaningful and valid to practice teams and consumers
- 3. Only used for intended purpose
- 4. The measures will relate to the expected impact of the HCH model of care
- 5. The data will be able to be collected via easy/ standardised processes within PHO and Practices

- 6. Incorporating easy interpretation / reporting at an individual provider level and in further detail where appropriate
- 7. The measures will be used for peer review to support mutual learning
- 8. No member shall criticise the performance of other member organisations, or use any of the information to the detriment of a fellow member
- 9. No external distribution of data or conclusions based on Health care home data is made without the unanimous consent of all contributors.

#### Health Care Home National Dataset: **Inaugural Measures**

| Urgent and<br>Unplanned<br>Care     | <ol> <li>Age standardised ED attendances per 1000 enrolled patients</li> <li>Age standardised After Hours Consultations per 1000 enrolled patients</li> <li>Age standardised ASH Admissions per 1000 enrolled patients</li> <li>Age standardised Acute Admissions per 1000 enrolled patients</li> <li>Aged standardised acute readmission rate</li> <li>Triage outcomes — % of patients managed without a same day face to face appointment</li> <li>Age standardised After Hours primary care Consultations per 1000 enrolled patients</li> <li>Primary options for acute care claim volumes per 1000 enrolled population</li> <li>Contracted A&amp;M / other Practice visits during business hours</li> <li>Hospital bed days in the last 6 months of life</li> <li>Average lead time to get an appointment</li> </ol>  |
|-------------------------------------|---|
| Proactive<br>Care                   | <ol> <li>Age standardised Nurse Consultations per 1000 enrolled patients</li> <li>Continuity of care measure (BMJ): percentage of consults with the GP seen most often over the 24month period</li> <li>Percentage of DNAs at hospital FSAs</li> <li>Partners in Health Scale — change in average score over time</li> <li>% patients with two plus chronic conditions with a care plan and named coordinator</li> </ol>  |
| Routine and<br>Preventative<br>Care | <ol> <li>Number of patient inbound secure messages through patient portal / 1000 adults</li> <li>No. of virtual (telephone/video) planned consults as % total consults</li> <li>Patients with activated patient portal access per enrolled population</li> <li>% of patients that have access to own notes (PHO measure)</li> <li>Smoking quit rate</li> <li>Percentage of fully immunised infants (at 8 months)</li> <li>Percentage of eligible women receiving cervical screening</li> <li>Percentage of eligible patients receiving CVD risk assessment (per current/<br/>operational guidelines)</li> <li>Dropped call rate</li> <li>Patient experience survey scores</li> <li>Wait times in the practice (post appointment time)</li> <li>Percentage of DNAs at the practice</li> <li>Percentage of population achieving or missing pre-planned or proactive checks</li> </ol> |
| Business<br>Efficiency              | <ol> <li>Practice team climate survey results</li> <li>% Room utilisation for clinical interactions</li> <li>No of aged standardised patients enrolled per GP FTE</li> <li>No of aged standardised patients enrolled per Nurse/ FTE</li> <li>Practice population</li> <li>Practice population churn</li> <li>Staff turnover</li> <li>Sick days per FTE per year</li> <li>Total phone calls per 1000 per month</li> </ol>  |

## **Health Care Home** Credentialing & Certification Process

There are three levels to be considered for 'signing off' a practice against the Health Care Home Model of Care Requirements

| Level         | Who undertakes   | Criteria   |  |
|---------------|--|--|--|
| Credentialing | PHO member of NZ<br>Health Care Home<br>Collaborative will<br>credential local<br>practices as Health<br>Care Home practices<br>in development | <ol> <li>Practice implement<br/>achieving all Healt<br/>at level 4 — includ<br/>approach to achie<br/>outcomes for all (e<br/>and patients living)</li> <li>Providing telephone<br/>(clinical triage) and<br/>to face care (e.g. te<br/>3. On the day appoint<br/>patients</li> <li>Call management<br/>including monitorio</li> <li>Extended hours (in<br/>6. Patient portal in p<br/>increasing accordio)</li> </ol> |  |
| Certification | NZ Health Care Home<br>Collaborative peer<br>assessors (Moderation<br>Group) will certify<br>practices outside their<br>local network          | <ul> <li>As for credentialing,</li> <li>1. The practice has in stratification and p</li> <li>2. The practice has d their development</li> </ul>  |  |
| Accreditation | NZ Health Care Home<br>Collaborative   | To be developed.   |  |

entation plan working towards Ith Care Home characteristics Iding an explicit practice-based ieving equitable health (especially for Māori, Pacific ng in high deprivation).

one assessment and treatment nd offering alternatives to face telephone / video consults) intment availability for triaged

it arrangements in place ring call metrics

(in accordance with practice plan)

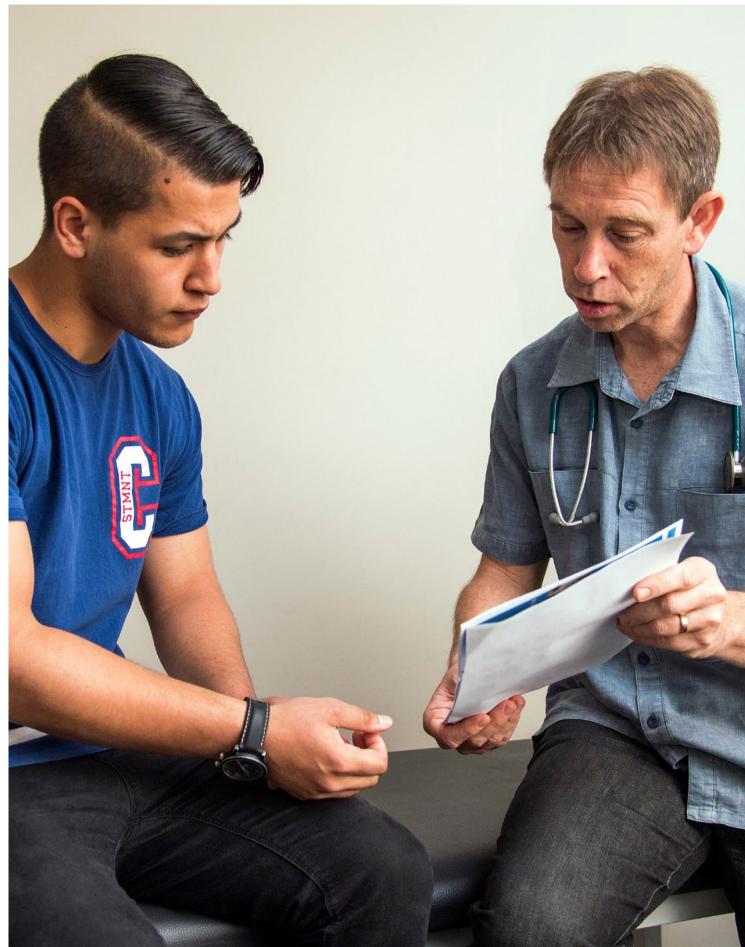

place and activated users ding to implementation plan

, plus:

introduced population

proactive care planning

demonstrated progress against nt plan in all 4 domains.

#### **New Zealand Health Care Home Collaborative Participating Organisations**

Practices or PHOs wishing to join or learn more about the Collaborative should contact collaborative@healthcarehome.org.nz

or one of the participating organisations below
