Health Care Home Collaborative (the Collaborative)

The Collaborative was formed in 2016 with the principle objective to support the establishment and ongoing development of the Health Care Home across New Zealand and to ensure HCH practices are of a high quality and provide a consistent standard of care.

To achieve its principle objective, the Collaborative will support, promote, maintain and oversee the HCH Model of Care with a view to improving patient health care, health outcomes and the management of related services. Members of the Collaborative include various PHOs and DHBs in New Zealand.

NZ Health Care Home (HCH) Model of Care Requirements

The HCH Model of Care is a patient-centric approach which enables primary care to deliver a better patient and staff experience, improved quality of care, and greater efficiency. The Collaborative established the HCH Model of Care Requirements, first published in July 2017 to demystify the HCH Model of Care, and to provide clear guidance for those who want to implement it. Consistent implementation of the HCH model in general practices nationally is important so that all patients enrolled in HCH practices can expect the same standard of service.

The HCH Model of Care requires practitioners to establish and maintain a list of services that meet specific requirements across four core domains:

1. Ready access to urgent and unplanned care.
2. Proactive care for those with more complex need.
4. Improved business efficiency & sustainability.

Within each domain a maturity matrix is provided with:
- Service elements that describe important HCH Model of Care requirements;
- Characteristics that allow a practice to map their current model of care systems and processes on a development scale.

The HCH maturity matrix for each domain provides a continuum of model of care descriptors, using scoring of 1 (low maturity) to 4 (high maturity) for each indicator, with 4 being the target on the continuum, i.e. what best looks like for a HCH Practice.

A maturity matrix approach has been used to recognise that HCH practices are on a continuous improvement journey, hence a developmental approach is being taken, rather than a quality assurance approach. Further clarification and descriptions of several terms and processes mentioned in this document are provided in a supplementary online guide and is available on the HCH Collaborative website: healthcarehome.org.nz

What's changed in this version?

This is the second iteration of the national HCH Model of Care requirements. We aim to review the requirements annually to ensure they remain relevant and to ensure that patient and whānau needs are reflected in the model. The changes in this version include a number of minor alterations to more accurately reflect the model as it is being implemented, and to clarify the expectations and definitions as set out by the National Collaborative. This second version also incorporates a stronger, more explicit equity lens. The addition of a new equity-focused service element requires HCH practices to demonstrate an understanding of inequities within their enrolled population. HCH Certification will require evidence of the Practice’s ability to monitor processes and outcomes by ethnicity and to develop a practice-based approach to achieving equitable health outcomes where possible (especially for Māori, Pacific and patients living in high deprivation). In addition, the national benchmarking measures (currently in development) will include reporting by ethnicity, to support continuous improvement for all enrollees.

The Collaborative is currently undertaking work to strengthen consumer co-design, and partnership, participation and protection of Māori within the HCH Model of Care. This work will be reflected in the next iteration of the requirements.
Health Care Home
Summary Characteristics

Urgent and Unplanned Care
- Same day access and appointment systems
- Access to care during business hours
- Patient wait times
- Telephone assessment & treatment (clinical triage)

Proactive Care
- Development of care plans
- Cultural consideration in care plans
- Interdisciplinary approach
- Community based resources
- Care coordination

Routine and Preventative Care
- Risk stratification
- Facility infrastructure
- Practice layout
- Receptions F2F and call free
- Workforce planning & development

Business Efficiency
- Clinical leadership
- Workforce planning
- Lean processes in place
- Continuous quality improvement
- Staff training
- Standardisation

Equity lens
Health plans
Prework
Continuity of care
Information Technology support
Affordability systems

Cultural needs
Patient engagement
Fully functional portal

What’s most important to our patients is that when they are ill or concerned about a health issue they receive clinical advice and treatment when needed.
## Domain: Proactive Care for those with complex needs

5.

Principles of the Health Care Home National Dataset

The purpose of collecting the national data set measures is to demonstrate system impact of the Health Care Home model of care and for individual practice and programme improvement.

The custodian of the national data set will be the New Zealand Health Care Home National Governance Group. The national collection is solely for benchmarking within the Collaborative community, and will not be used for judgement, or distributed externally without explicit permission of the members.

The principles relevant to the measures include:

1. All measures will be reported through an appropriate equity lens
2. The measures will be meaningful and valid to practice teams and consumers
3. Only used for intended purpose
4. The measures will relate to the expected impact of the HCH model of care
5. The data will be able to be collected via easy/standardised processes within PHO and Practices
6. Incorporating easy interpretation/reporting at an individual provider level and in further detail where appropriate
7. The measures will be used for peer review to support mutual learning
8. No member shall criticise the performance of other member organisations, or use any of the information to the detriment of a fellow member
9. No external distribution of data or conclusions based on Health care home data is made without the unanimous consent of all contributors.

Health Care Home National Dataset: Inaugural Measures

Urgent and Unplanned Care
1. Age standardised ED attendances per 1000 enrolled patients
2. Age standardised After Hours Consultations per 1000 enrolled patients
3. Age standardised ASH Admissions per 1000 enrolled patients
4. Age standardised Acute Admissions per 1000 enrolled patients
5. Aged standardised acute readmission rate
6. Triage outcomes — % of patients managed without a same day face to face appointment
7. Age standardised After Hours primary care Consultations per 1000 enrolled patients
8. Primary options for acute care claim volumes per 1000 enrolled population
9. Contracted A&M / other Practice visits during business hours
10. Hospital bed days in the last 6 months of life
11. Average lead time to get an appointment

Proactive Care
12. Age standardised Nurse Consultations per 1000 enrolled patients
13. Continuity of care measure (BMJ); percentage of consults with the GP seen most often over the 24-month period
14. Percentage of DNAs at Hospital FSAs
15. Partners in Health Scale — change in average score over time
16. % patients with two plus chronic conditions with a care plan and named coordinator
17. Number of patient inbound secure messages through patient portal / 1000 adults
18. No. of virtual (telephone/video) planned consults as % total consults
19. % of patients that have access to own notes (PHO measure)
20. % of patients with two plus chronic conditions with a care plan and named coordinator
21. Smoking quit rate
22. Percentage of fully immunised infants (at 8 months)
23. Percentage of eligible women receiving cervical screening
24. Percentage of eligible patients receiving CVD risk assessment (per current/operational guidelines)
25. Dropped call rate
26. Patient experience survey scores
27. Wait times in the practice (post appointment time)
28. Percentage of DNAs at the practice
29. Percentage of population achieving or missing pre-planned or proactive checks
30. Practice team climate survey results
31. % Room utilisation for clinical interactions
32. No of aged standardised patients enrolled per GP FTE
33. No of aged standardised patients enrolled per Nurse/ FTE
34. Practice population
35. Practice population churn
36. Staff turnover
37. Sick days per FTE per year
38. Total phone calls per 1000 per month

Routine and Preventative Care

Business Efficiency

Some of these measures continue to be developmental and will require further work to define numerators and denominators. Not all Health Care Home practices will wish to benchmark on all the indicators – practices and PHOs will choose those most relevant to their context locally.
Health Care Home Credentialing & Certification Process

There are three levels to be considered for ‘signing off’ a practice against the Health Care Home Model of Care Requirements

<table>
<thead>
<tr>
<th>Level</th>
<th>Who undertakes</th>
<th>Criteria</th>
</tr>
</thead>
</table>
| Credentialing  | PHO member of NZ Health Care Home Collaborative will credential local practices as Health Care Home practices in development | 1. Practice implementation plan working towards achieving all Health Care Home characteristics at level 4 — including an explicit practice-based approach to achieving equitable health outcomes for all (especially for Māori, Pacific and patients living in high deprivation).  
2. Providing telephone assessment and treatment (clinical triage) and offering alternatives to face to face care (e.g. telephone / video consults)  
3. On the day appointment availability for triaged patients  
4. Call management arrangements in place including monitoring call metrics  
5. Extended hours (in accordance with practice plan)  
6. Patient portal in place and activated users increasing according to implementation plan |
| Certification  | NZ Health Care Home Collaborative peer assessors (Moderation Group) will certify practices outside their local network | As for credentialing, plus:  
1. The practice has introduced population stratification and proactive care planning  
2. The practice has demonstrated progress against their development plan in all 4 domains. |
| Accreditation  | NZ Health Care Home Collaborative                                             | To be developed.                                                          |
Practices or PHOs wishing to join or learn more about the Collaborative should contact collaborative@healthcarehome.org.nz or one of the participating organisations below.
